

Adding a RSS Feed Custom Widget to your Homepage

The first, and often hardest, task is to decide which blog or news source you wish to bring into your Avenue course. Once you have selected a blog or news source look to see if they have a link to a “feed” or an icon like this:

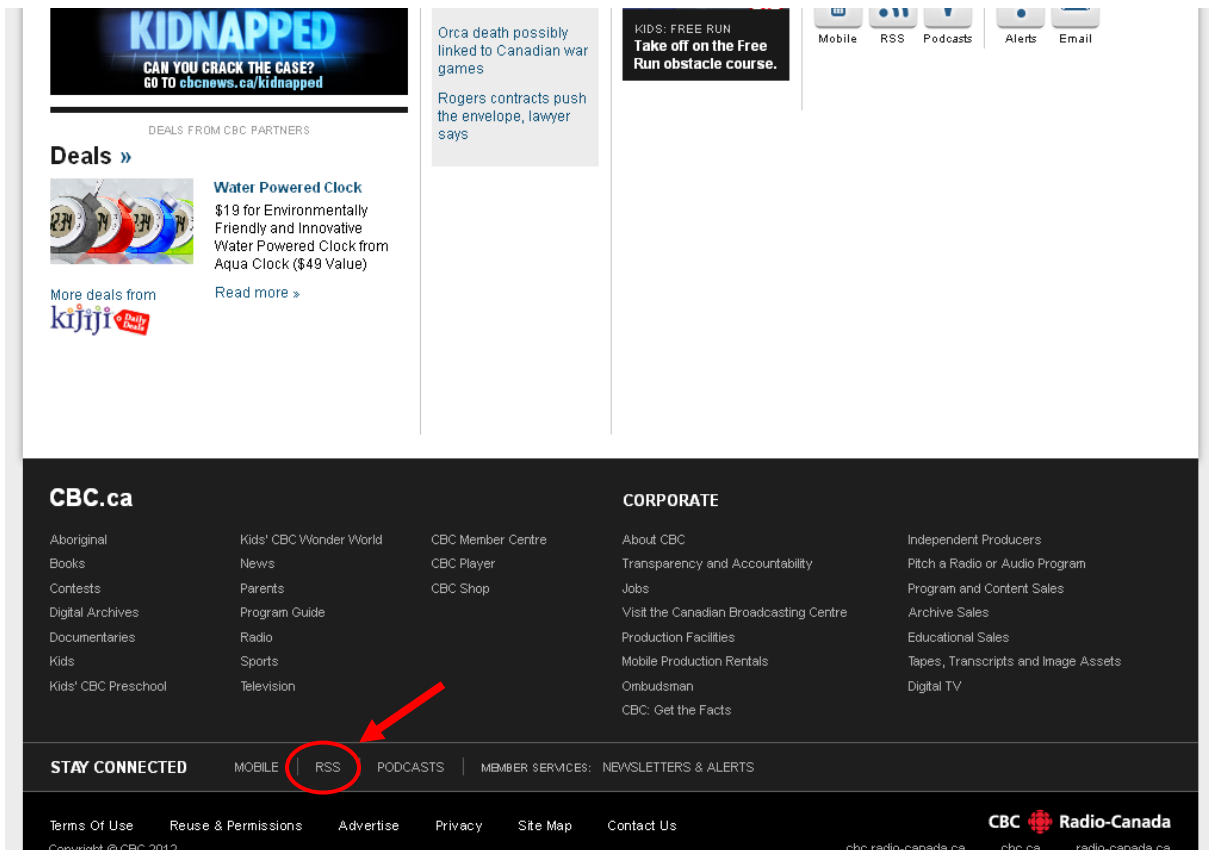

This icon indicates that the information contained on this page is essentially being broadcast. Typically, one uses Microsoft Outlook, Google Reader, Feed.ly, Netvibes or any number of other feed readers to allow the websites you visit regularly to be consolidated in one place to be read by you.

For more information about RSS Feeds, please see this page:

<http://www.commoncraft.com/video/rss>

For this example, we will be using CBC as a source of information. CBC does not display the RSS icon on their webpage, however, you can find a link to the RSS feeds at the bottom of their website.

A screenshot of the CBC.ca website footer. The footer is dark grey with white text. It is organized into several columns. On the left, there is a 'CBC.ca' logo and a list of categories including Aboriginal, Books, Contests, Digital Archives, Documentaries, Kids, and Kids' CBC Preschool. In the middle, there is a 'CORPORATE' section with links like About CBC, Transparency and Accountability, Jobs, Visit the Canadian Broadcasting Centre, Production Facilities, Mobile Production Rentals, Ombudsman, and CBC: Get the Facts. On the right, there is a 'STAY CONNECTED' section with links for MOBILE, RSS (circled in red with a red arrow pointing to it), and PODCASTS. Below this is a 'MEMBER SERVICES: NEWSLETTERS & ALERTS' section. At the very bottom, there are links for Terms of Use, Reuse & Permissions, Advertise, Privacy, Site Map, and Contact Us. The CBC Radio-Canada logo and website URLs (cbc-radio-canada.ca, cbc.ca, radio-canada.ca) are also present.

Click on that link to access CBC’s news feed for different topics. On this page you will see the RSS icon and a web link listed next to the icon. Highlight the link, and copy it by pressing Ctrl-C, or right clicking the link and selecting copy. If you click on the link you will see the raw feed in XML.

CBC RSS Feeds

CBC RSS feeds allow you to access CBC content in a variety of ways at your convenience.

Using an RSS Reader or by integrating an RSS feed into your blog or other interface, you can access updated CBC News, Sports, Entertainment, blogs & other CBC content in the way that works best for you.

CBC's news headline RSS feeds are constantly updated as new stories are published.

Commercial Use of CBC RSS Feeds

If you are interested in using CBC RSS feed content for a commercial venture, please see our Commercial Use page.

CBC Podcasts

CBC Podcasts provide you with the best of our popular national Radio & TV programs, regional magazines, exclusive musical talent and special podcast-only features.

Podcasting

CBC Mobile Services

Whether you own an iPhone, BlackBerry or other mobile phone, access CBC content when and where you want it with CBC's mobile services.

Mobile Services

CBC Free Headlines Service

With this new service, you will now be able to publish free daily headlines on your personal website or your company's internet site.

To get the feed into an Avenue course, you will need to use some code to get this to work. Thankfully, the website <http://www.feed2js.org> will convert RSS feeds to something we can put in a widget on your Avenue homepage. On the Feed2Js website, you can read more about RSS feeds, but we'll want to convert RSS to a piece of Javascript, which we can embed into a widget. To do that, click the tab to "Build".

Feed2JS
Using RSS Feeds in your web pages is just a cut 'n paste away!

About Find **Build** Style Download Help Mods More

Build a Feed!
The tool below will help you format a feed's display with the information you want

Begin to build the Javascript by pasting (Ctrl-V or right click and select paste) in the box labelled URL.

Build a Feed!
The tool below will help you format a feed's display with the information you want to use on your web site. All you need to enter is the **URL for the RSS source**, and select the desired options below.

First, be sure to use the **preview** button to verify the content and format. Once the content is displayed how you like, just use the **generate javascript** button to get your code. Could it be an easier? The last step is exploring your options for **styling your displayed feed**.

URL Enter the web address of the RSS Feed (must be in http:// format, not feed://)

 Note: Please verify the URL of your feed (make sure it presents raw RSS) and **check that it is valid** before using this form.

Show channel? (yes/no/title) Display information about the publisher of the feed (yes=show the title and description; title= display title only, no=do not display anything)
 yes title no

Number of items to display. Enter the number of items to be displayed (enter 0 to show all available)

Show/hide item descriptions? How much? (0=no descriptions; 1=show full description text; >1 = display first n characters of description; n=-1 do not link item title, just display item contents)

Show item author? (yes/no) Display the name of an item's author (yes=show the title and description; no=do not display anything)
 yes no

Use HTML in item display? ("yes" = use HTML from feed and the full item descriptions will be used, ignoring any character limit set above; "no" = output is text-only formatted by CSS; "paragraphs" = no HTML but convert all RETURN/linefeeds to
 to preserve paragraph breaks)
 yes no preserve paragraphs only

Show item posting date? (yes/no) Display the time and date for each item.
 yes no

Time Zone Offset (+n/-n/feed) Date and timer are converted to GMT time; to have display in local time, you must enter an offset from your current local time to **Mon, 09 Apr 2012 13:31:00 +0000 (GMT)**. If your local time is 5 hours before GMT, enter -5. If your local time is 8 hours past GMT, enter +8. Fractional offsets such as +10:30 must be entered as decimal +10.5. If you prefer to just display the date is recorded in the RSS, use a value = `feed`

Target links in the new window? (n="no, links open the same page", y="yes, open links in a new window", "xxxx" = open links in a frame named 'xxxx', 'popup' = use a **JavaScript function** `popupFeed()` to open in new window)

UTF-8 Character Encoding
 Required for many non-western language web pages and also may help if you see strange characters replacing quotes in your output (see [help pages](#) for more information).
 use UTF-8 character encoding

As long as you have the correct address for the feed, you can press the button to Preview Feed. You can change the parameters and experiment how the widget will be displayed to your students. In this example, I will change the following settings:

- Use HTML in Item Display? Set to Yes.
- Show Item Posting Date? Set to Yes.
- Show/hide item descriptions? How much? Set to 1, which will show the full description.
- Target links in the new window? Set to Y, which will open any linked articles outside of Avenue's window.

When you are happy with the way the feed looks, click the button to Generate JavaScript.

Feed2JS
Using RSS Feeds in your web pages is just a cut 'n paste away!

Build a Feed!
The tool below will help you format a feed's display with the information you want to use on your web site. All you need to enter is the **URL for the RSS source**, and select the desired options below.

First, be sure to use the **preview** button to verify the content and format. Once the content is displayed how you like, just use the **generate javascript** button to get your code. Could it be an easier? The last step is exploring your options for **styling your displayed feed**.

Get Your Code Here
cut and paste javascript:

```
<script language="JavaScript" src="http://www.feed2js.org
//feed2js.php?src=http%3A%2F%2Frss.cbc.ca%2Flineup%2Farts.xml&chan=ys
date=y&utf=y&pc=y&html=a" charset="UTF-8" type="text/javascript">
</script>
<noscript>
<a href="http://www.feed2js.org//feed2js.php?src=http%3A%2F

pc=y&html=y">View RSS feed</a>
URL Enter the web address of the RSS Feed (must be in http:// format, not feed://)
http://rss.cbc.ca/lineup/arts.xml
note: please verify the URL of your feed (make sure it presents raw RSS) and check that title is valid before using this form.
Show channel (yes/no/title) Display information about the publisher of the feed (yes=show the title and description; title=
display title only, no=do not display anything)
 yes  title  no
Number of items to display. Enter the number of items to be displayed (enter 0 to show all available)
0
Show/hide item descriptions? How much? (0=no descriptions; 1=show full description text; >n>1 = display first n characters of description; n=-1 do not link item
title, just display item contents)
0
```

Show n' Tell!
Preview Feed
Generate JavaScript

You will want to copy all of the Javascript generated, select and copy the entire text.

Now move over to Avenue and go to the course where you want to display this feed. Once in the course, click Edit Course. Click on the Widgets link.

Cancel Save Save and New

Click on the Content tab. In the bottom of the editor window (where you would type text or insert pictures) look for a icon with a page and a small world:  This is the Edit HTML icon. Click it and a window will pop open, paste the Javascript you got from Feed2JS.

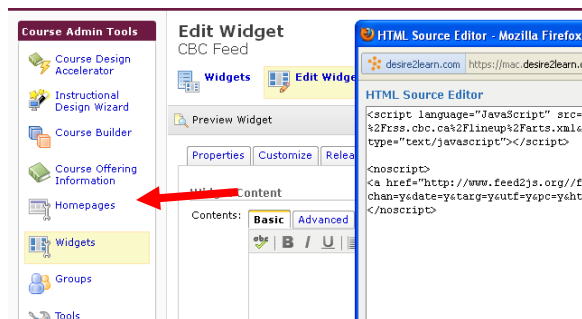

Click Update and the window will close, you'll notice that your Widget editor window has not changed. Click Save to save your work. You're done creating the widget.

To make this widget appear on your homepage, and visible to your students, there's a couple more steps to take.

First we have to make a copy of your homepage, and then add this new widget to the homepage you copied. If you have customized your homepage previously, you will not need to create a new homepage; you can skip these steps and add the widget to your homepage.

If you are back at your course homepage, click Edit Course, then Homepages. If you are on the Course Admin Tools page, you can get to Homepages by clicking Homepages in the left hand sidebar.

if you have only the Course Default, I would copy that by clicking the icon that looks like two pages. Complete the process by confirming you wish to copy, by clicking "Copy". If you already have another homepage you would like to use, skip this step, and proceed to edit the homepage.

Course Default (Course Default) Default homepage for courses Last Modified: Jan 4, 2011 2:58 PM	Current Active	 

- I would rename the homepage to be something like "Fall 2012 Homepage", then click on the Content/Layout tab.

Decide which column you wish to display the RSS feed in by clicking "Add Widget" at the bottom of the column. I would suggest staying away from the Header or Footer area as they display across the width of the screen and make reading difficult. I will place the example feed in the Centre Panel. From the popup box, select the widget by clicking the checkbox next to it's name and click "Save". Widgets are displayed alphabetically, so the widget you are looking for may appear on page 2 of the listings.

If you do not like the location of the widget, you can choose to move it by clicking the small down arrow next to the widget name. When finished, click Homepages (either in the sidebar on the left hand side of the screen, or near the top of the page) and set your new homepage as active - this replaces the default homepage with your new homepage.

Finally, click on Course Home to see your new homepage in action.
